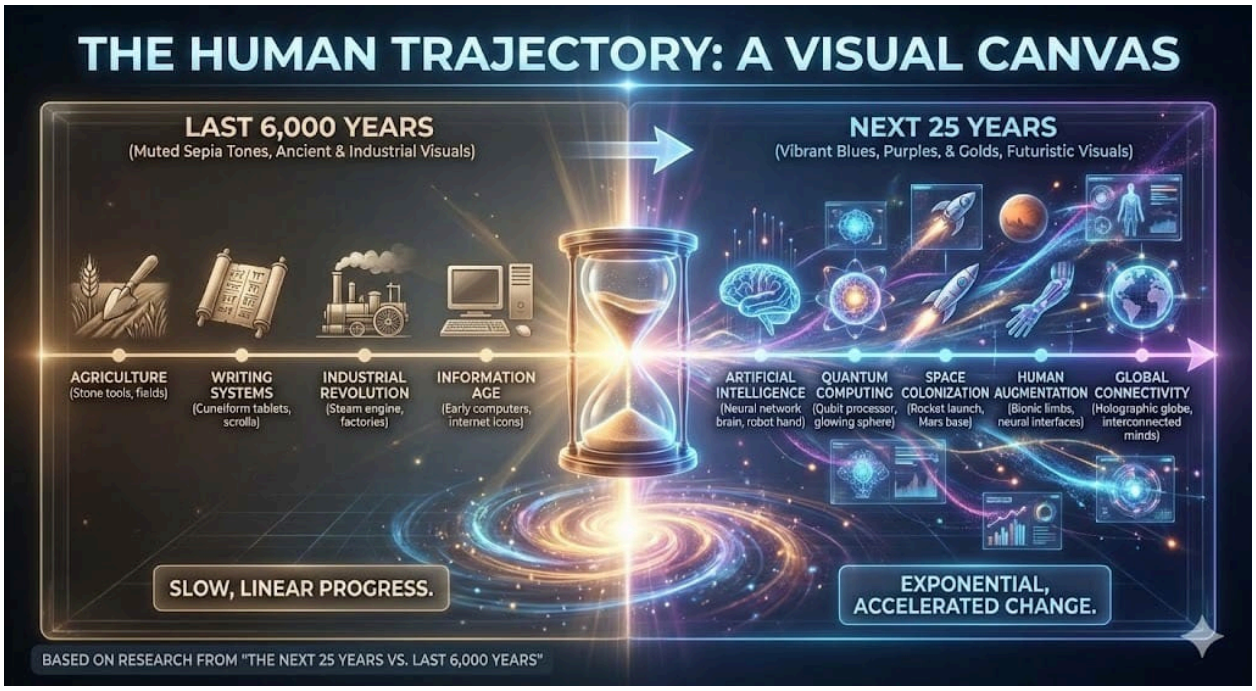
The AIRS Revolution

By Bryce Smith

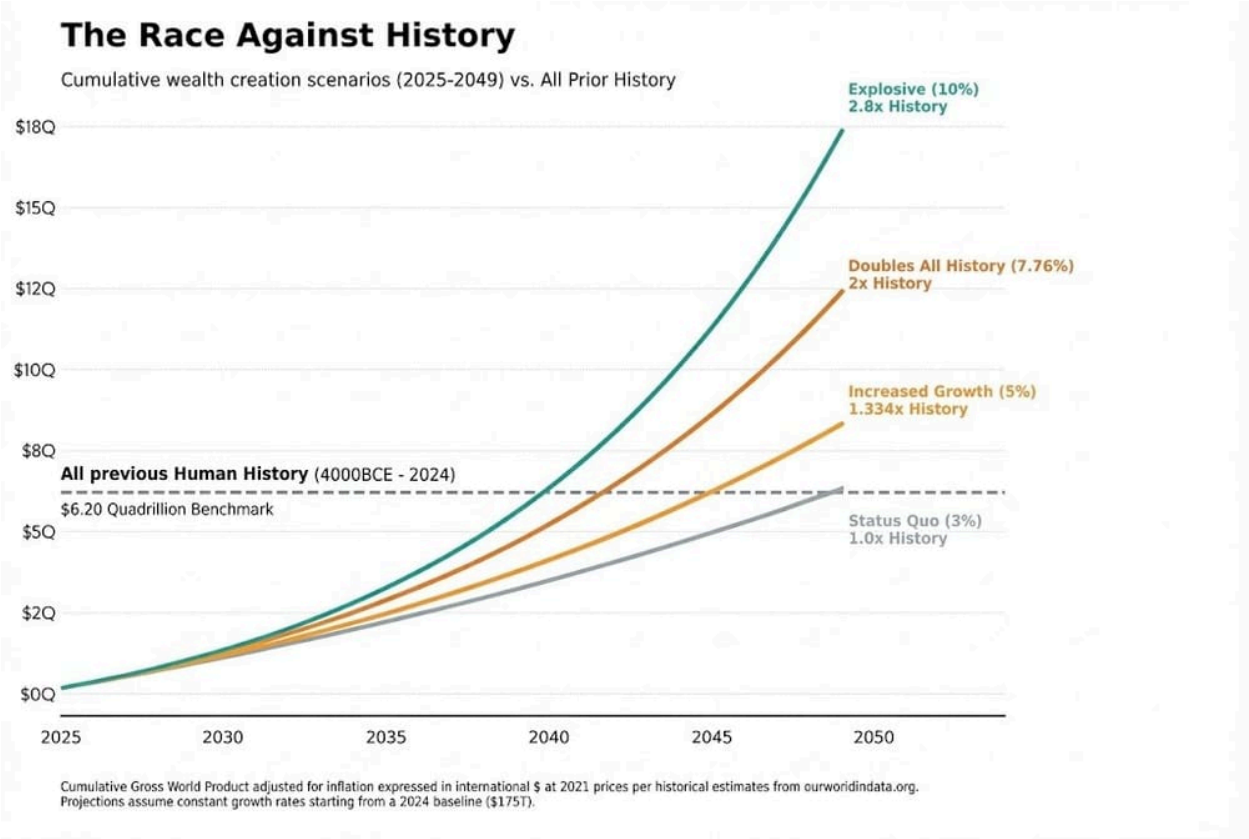
January 15, 2026

As we start off 2026, I want to focus, as always, on what's most important for us as Revolution Investors. Namely, continuing to find the most Revolutionary companies that are changing the world with new technologies and technological platforms. Moreover, I want to spend more time talking about the epiphany I had in the fourth quarter about the fact that The AI Revolution, The Robotics Revolution and The Space Revolution – what I'm calling The AIRS Revolution – will create as much wealth for society as was created since the dawn of mankind. We already have some of the best-positioned companies driving and benefitting from The AIRS Revolution, but we are currently hard at work finding other companies in this space that are sitting at potential inflection points. More to come on that.

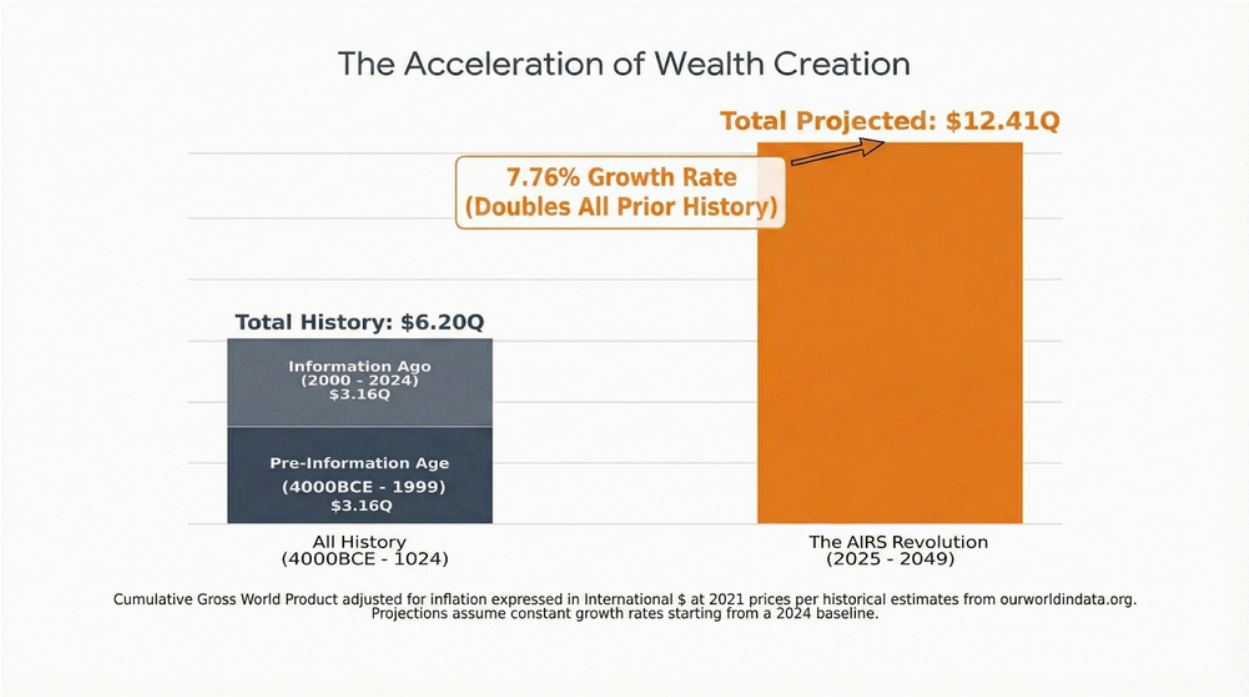


The math is pretty straightforward. The Gross World Product (GWP) is a measure of all the economic activity, including all goods and services, around the globe in a given year. Now realize that half of all the wealth, prosperity, value, services, applications, buildings and products ever produced in human history were built over just the last 25 years, during the "Information Age." And more importantly, over the next 25 years, we will double the wealth of all of history

assuming a measly 3% growth rate. If the growth rate accelerates to 7.76% (as it very well could according to our AI/robotics/space GWP model), we will produce more than 2x all of the wealth, prosperity, value, services, applications, buildings and other products produced in human history.

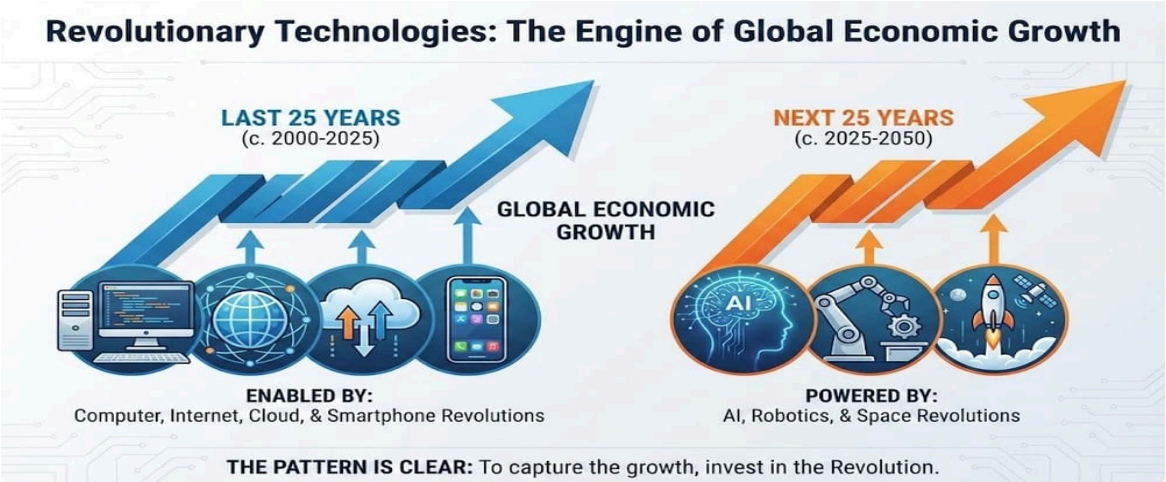


The fact is that none of that economic growth from over the last 25 years or over the next 25 years would have/will happen without Revolutionary Technologies enabling it to happen. Over the last 25 years, it was The Computer, Internet, Cloud and Smartphone Revolutions that enabled most of the remarkable global economic growth that society enjoyed. And that's why I've been almost exclusively invested in and had the confidence to hold onto all of my holdings in the companies that drove The Computer, Internet, Cloud and Smartphone Revolutions for all these decades. The fact that those holdings also became the most valuable companies on the planet over the last 25 years isn't a coincidence.



Over the next 25 years, it will be The AIRS Revolution that will enable most of the (even MORE) remarkable global economic growth that society will enjoy over the next 25 years. And that's why we will continue to be almost exclusively invested in the companies that will drive The AIRS Revolution for many years to come.

While we obviously pay attention to the Fed, tax policies, geopolitics and so on, we're not sitting around parsing the Fed minutes and wringing our hands over quarter-to-quarter inflation data all day long, missing the forest for the trees. **The engine of prosperity hasn't been and won't ever be monetary or tax policy or war or carbon. The growth and prosperity creation really is all about Tech Revolutions. And so are we.**



The setup for the next 25 years is just that explosive. We aren't just connecting people anymore; we are digitizing intelligence and labor itself. The AI Revolution, combined with The Robotics Revolutions, is going to unleash productivity gains that will make the Internet boom look like a warm-up act. The Space Revolution takes our heretofore global economy into a new realm of galactic economic activity. GWP (Gross World Product) will, in another five to ten years or so, be instead GGP (Gross Galactic Product™). We are talking about solving scarcity, automating the mundane, and expanding our economic footprint quite literally beyond Earth. The growth is coming, and it's going to be exponential, but it will only belong to those who recognize that Revolutionary Technology is the horse to bet on.
